Narrative Description of Indicator

Based on data provided by OSEP on www.ideadata.org, Maryland provided early intervention services to 3.11% of the 2009 Maryland resident birth to three-year-old population of children and met the State target of providing early intervention services to 2.88% of the Maryland 2009 resident birth to three-year-old population. Compared to national data, Maryland provided intervention services to 0.47% more children birth to three years of age than the national baseline and ranked 18th among States and the U.S territories. The Maryland resident population for birth to 3-year-old children increased in FFY 2009 by (2.8%). During the same year, the 24 LITPs received 310 (2.4%) more referrals than they received in FFY 2008.

Eleven of Maryland's 24 LITPs met the State target of 2.88% of the percentage of birth to three-year-old children receiving intervention services. Meeting the State target is attributed to State/local targeted public awareness activities, including collaboration with local childcare providers, physicians, hospitals, audiologists, and local departments of social services. A contributing factor is increased knowledge of many parents, as a result of popular media activities on the importance of the childhood years in preparing a child for school. If the State target was not met, LITPs were required to develop and implement improvement plan strategies and, as necessary, received technical assistance from MSDE.
